17. The Anatome of an Hedge-hog, in which was found a Muſcle of a circular form embracing the *panniculus carnoſus*, and reaching to the feet, tail and head of the animal, and thereby aſſiſting it for a circular contraction at its pleaſure.

18. Of the Womb of a Hare diſſolving her own fœtus; which our Author from Monſ. *Steno* adſcribes to a *menſtruum* furniſh't by nature, and fit to prevent putrefaction. Whence ſome hope is raiſed for ſuch women as retain dead children, if from other cauſes they abound not with putrid humors.

29. Of a poor Pariſian Woman, which having for three years together taken no other food but *Spirit of Wine*, was thence burnt to aſhes, when on a certain evening ſhe ſat down & fell aſleep in a chair of ſtraw.

20. That at *Copenhagen*, the Magnetick Needle did then vary 3 deg. 35 min. Weſtward; and that with the ſame Needle the variation at *Huenna*, being but 3 miles from *Copenhagen*, was found to be 2 deg. and 35 min. Theſe obſervations were made by Dr. *Eraſmus Bartholin* and Monſieur *Picard*, two able and accurate obſervers.

21. That by reaſon of the ſuſpicion, which ſome conſiderable men entertain of the Variation of the *Meridian*, they have made in a convenient place at *Copenhagen* an accurate Meridian, for future obſervation and compariſon.

22. That the *Norwegians* make uſe with great ſucceſs of *Tarr* of Firr-trees in Malignant Feavers, by drinking it in their bier: And that they employ the powder and moſs of that Wood in very dangerous wounds; as alſo that *Pitch* is a preſent remedy for the Gout.

23. That an exceſſive fatneſs in a man of above 60 years of age was cured by Pills made of *Mercurius dulcis*, cauſing a great ſalivation: Where the Author notes from Dr. *Borrichius*, that, though it hath been already known, that a noyſom *pituita* is diſcharged by the Salival glanduls, yet 'tis new, that the cauſe of two much fatneſs is carried off by the ſame way.

25. That a live Hedge hog being ſhut up in a great pipkin, and a flame made about it, the animal for a long while gave not any ſign of pain; only it had contracted it ſelf into the ſhape of a very round ball, ſhooting out his briſtles round about, as if he would make them fight againſt the violence of the fire: which laſted a great while to the amazement of the by-ſtanders, who took notice, that at length, all about him being red hot, and the flame ſtriking upon his *panniculus carnoſus*, and the briſtles falling off together with it, the poor creature died with no other revenge than a ſlight grunting noiſe.

24. That the Humors of the Eyes of Gees and Hens, even the Chryſtallin, have been reſtored, together with the ſight, without any art, by Nature alone, and that perhaps by the afflux of the nervous liquor of the animals.
